

## Heavy Duty Series

Pressure washers use water at high pressure for washing a variety of vehicles and machinery and for cleaning any type of washable surface or floor. They can be used in a wide and varying number of sectors e.g. Agriculture, industrial, marine and shipping, car washing, transport industry &ndash; to name but a few.

Sellarc's high pressure diesel and petrol cleaners are ideal for heavy duty users. They feature a rugged and dependable exterior and are completely mobile and self-contained (needs only water supply). Diesel models feature self-start function! Can be used anywhere, indoors and outdoors.

All models supplied with 50' delivery hose and lance gun, for adjustable, dual control.

High pressure cleaners are divided into 3 main groups &ndash; cold water cleaners, hot water cleaners and static units.

You would usually need a hot water pressure washer when grease oil or fat needs to be removed. A cold pressure washer could be used in these circumstances but you would need to use a higher concentration of chemical.
